Sales and Customer Support

Training Guide

Product knowledge, positioning, pricing, customer guidance, troubleshooting, and escalation support.

Training objective

Enable Sales and Customer Support teams to explain the product accurately, guide guests confidently, recognize known limitations, and route issues to the correct operational owner.

1. Product and Problem Overview

My Concierge is a virtual concierge experience within the hotel mobile app. Checked-in guests can discover room service, dining, spa, hotel activities, and relevant local recommendations from one mobile destination. Supported transactions include ordering, reservation, confirmation, payment or folio posting where eligible, and status visibility where available.

Problem statement
Guests may still depend on paper menus, phone calls, manual confirmation, and separate service channels. My Concierge creates a clearer digital path while helping hotels improve service discoverability and reduce repetitive coordination.

Product goals

Goal	Operational meaning
Seamless self-service	Guests complete common transactions without calling staff.
Digital adoption	The mobile experience becomes a preferred entry point for supported services.
Revenue growth	Hotels increase discovery, completed bookings, order value, and future partner sales.
Operational efficiency	Requests route to the responsible service team with less manual handling.
Relevant discovery	Guests see useful services and experiences for the current stay.
Trust and reliability	Guests receive transparent details, secure steps, confirmation, and status visibility.

2. Market, Ideal Customer, and Rollout

The product operates in the in-stay hospitality-services market. It is embedded in the existing hotel app rather than sold as a separate guest subscription.

Ideal customer

Customer	Signals	Need	Where Sales can reach them
Frequent business traveller	Uses mobile check-in or digital key; values time and predictability.	Complete useful stay tasks quickly.	Participating properties, loyalty communications, digital check-in journeys, and owner conversations focused on business-travel demand.
Digitally engaged loyalty member	Already uses app account, booking, key, or payment features.	A seamless extension of the existing digital relationship.	Owned app surfaces, lifecycle campaigns, and properties with strong app adoption.
Service-rich hotel or resort	Offers room service, dining, spa, activities, or concierge inventory.	Increase service discovery and operational consistency.	Owner relations, property operations, and portfolio rollout discussions.
Leisure-oriented guest segment	Interested in dining, wellness, family activities, or local experiences.	Discover relevant options with less planning effort.	Destination properties, resorts, and arrival or on-stay communications.

Target rollout market

- Participating properties with stable app adoption and reliable service operations.
- Hotels with meaningful room-service, dining, spa, or activity inventory.

- Properties able to maintain accurate pricing, hours, availability, routing, and fulfilment ownership.
- Rollout should remain property-qualified because supported services may vary by location.

Sales qualification question
Does the property have sufficient mobile adoption, service inventory, operational ownership, accurate availability, and support readiness to deliver the experience consistently?

3. Competitive Context

Major hotel loyalty ecosystems and traditional offline channels are the closest alternatives. Avoid unsupported claims about competitor revenue generated by concierge capabilities.

Capability	My Concierge	Marriott Bonvoy	World of Hyatt
Visual mobile service ordering	Core experience	Available at selected properties	Strongest at selected premium properties
Dining, spa, and activities	Unified supported-category entry	Varies by property and service	Varies by property and service
Local discovery	Planned integrated discovery and booking	Partnership-based experiences	More limited comparable marketplace scope
Contextual recommendations	Stay-aware, permission-based goal	Basic or journey-dependent	Emerging capability
Unified payment and confirmation	Stored payment or folio posting where eligible	Journey varies by service	Journey varies by service

How to position the difference

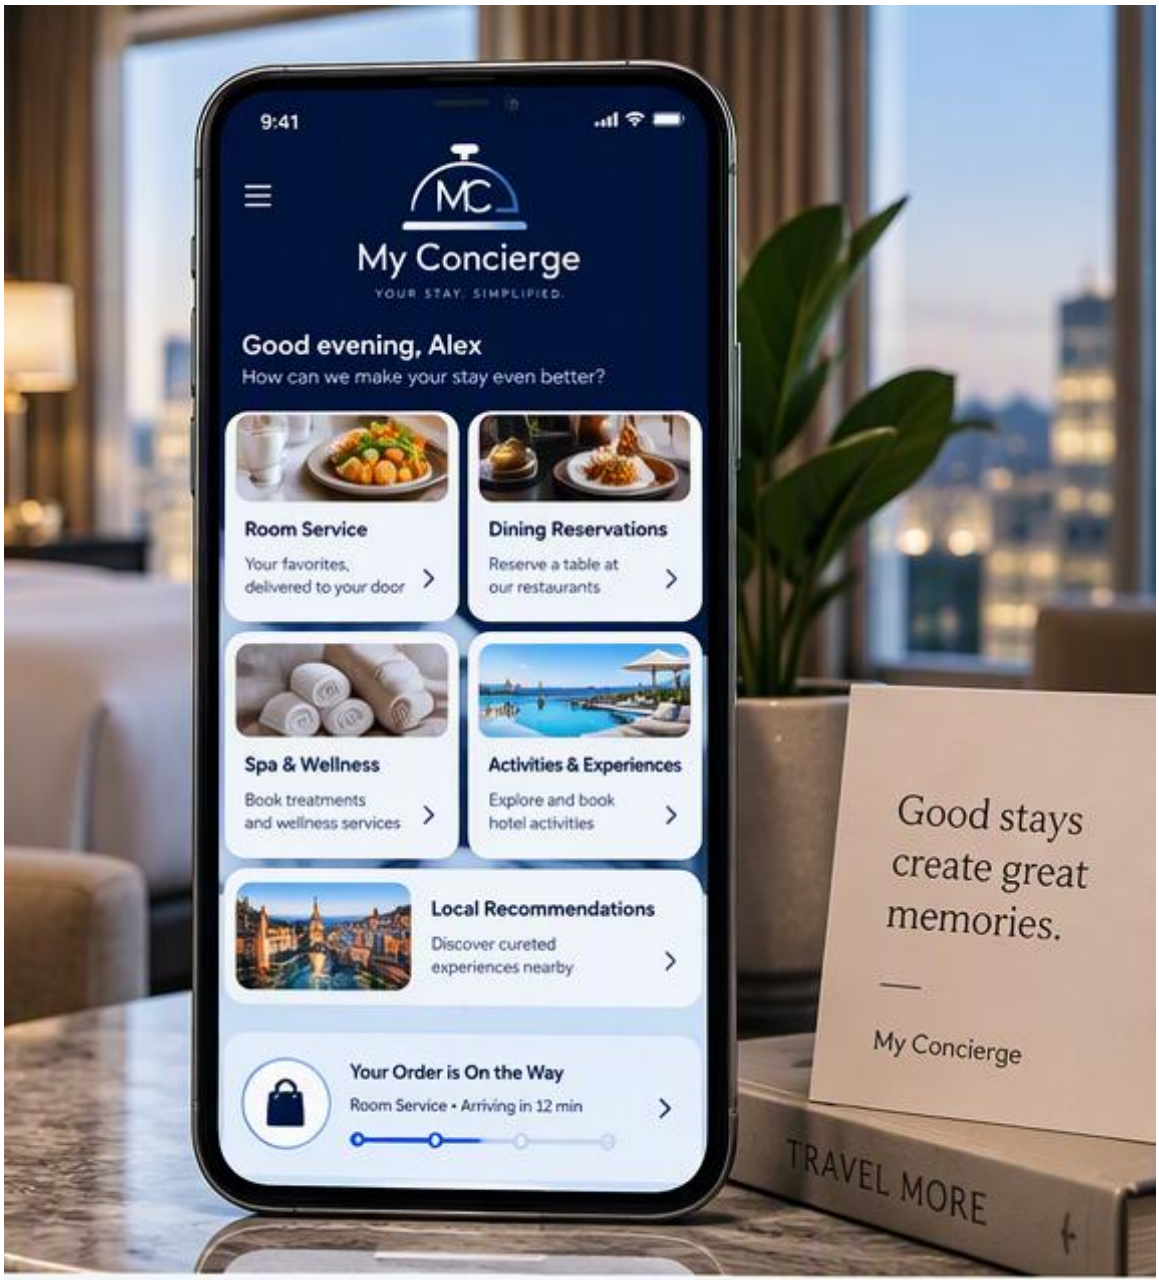

- Emphasize one mobile destination across supported hotel services.
- Explain the complete journey from discovery through confirmation and visibility.
- Highlight contextual relevance without overstating personalization.
- Avoid saying that all services are available at every hotel.

4. Product Positioning and Value

Positioning statement
For checked-in guests who want fast, convenient control of the stay, My Concierge brings room service, reservations, activities, and relevant recommendations into one clear mobile journey. Unlike fragmented calls, paper menus, and redirects, the product helps guests complete supported transactions without leaving the hotel app.

Guest value	Hotel value
Faster access to supported services.	Greater visibility for available service inventory.
Convenient ordering and reservation from the guest device.	Opportunity to increase transaction volume and value.
Clear prices, availability, terms, and confirmation.	Fewer routine calls and less manual coordination.
Reservation details and tracking where supported.	More efficient routing to responsible teams.
Relevant hotel and local discovery.	Stronger app engagement throughout the stay.

5. Core Features

My Concierge dashboard concept used for Sales and Support product orientation.

Feature	What the guest can do	What Sales should emphasize	What Support should know
1. In-App Service Ordering	Browse room-service and amenity options, review charges, confirm payment, and track fulfilment.	Convenience, clear visual menus, transparent review, and fewer calls.	Inventory, pricing, payment eligibility, duplicate-order prevention, and tracking state may require property-specific checks.
2. Reservations and Activities	View availability and reserve dining, spa, fitness, cabanas, and hotel activities.	One place to discover and organize valuable stay experiences.	Availability, cancellation rules, and confirmation depend on participating service systems.
3. Personalized Recommendations	View relevant hotel services and local suggestions based on stay context and permitted preferences.	Useful discovery at relevant moments during the stay.	Recommendations do not guarantee inventory; privacy and consent rules apply.

Feature	What the guest can do	What Sales should emphasize	What Support should know
4. Confirmation and Visibility	Review order confirmation, reservation details, and live status where supported.	Greater confidence after the transaction.	Stale or delayed status should be verified with the responsible service team.
5. Unified Payment or Folio Posting	Use an eligible stored payment method or post supported charges to the room folio.	A consistent and convenient transaction path.	Eligibility, taxes, service charges, tips, and property rules must be transparent before confirmation.

6. How the Experience Works

Stage	Guest action	Expected result
Open	Open the hotel app during an active stay and select My Concierge.	Property-supported service categories appear.
Discover	Choose Room Service, Dining, Spa, Activities, or Local Recommendations.	Relevant property inventory is displayed.
Review	Select an item, venue, service, or experience.	Price, availability, timing, terms, and required details appear.
Complete	Add to order or reserve, then confirm payment or folio posting where eligible.	One successful order or reservation is created.
Manage	View confirmation, reservation information, or current status.	The guest understands the next step and can obtain help if needed.

Important distinction
Room Service is a delivery transaction. Dining Reservations is a table-booking transaction. Sales demonstrations and support conversations should keep these journeys clearly separate.

7. Pricing and Commercial Model

Guest pricing

- No separate access fee for My Concierge.
- Guests pay the existing price of the selected service, meal, activity, upgrade, or experience.
- Taxes, service charges, tips, cancellation terms, and eligibility are displayed before confirmation where applicable.

Property and partner economics

- Participating hotels retain control of service inventory and pricing.
- Commercial value is expected through increased discovery, conversion, order value, upgrades, and operational efficiency.
- Future local-experience bookings may generate an affiliate or marketplace commission, with a planning range of 10% to 15%, subject to commercial validation.

Offers and discounts

- Property-funded launch promotions may be offered for selected services.
- Offers should include eligibility, property, date, inventory, and cancellation restrictions.
- Discounts are optional and are not required for the core value proposition.

Sales language
Describe My Concierge as included access to a digital service channel. Do not describe it as a separate free product if the underlying services still carry their normal prices.

8. Sales Conversation Guide

Conversation stage	Recommended approach	Example
Open with the property problem	Ask how guests currently discover and request on-property services.	How many service journeys still depend on room phones, printed information, or manual routing?
Connect to guest value	Explain convenience, transparency, and control.	Guests can see supported services, complete transactions, and access confirmation in one mobile journey.
Connect to commercial value	Focus on existing inventory rather than a new guest subscription.	The product makes dining, room service, spa, activities, and upgrades easier to discover and purchase.
Qualify readiness	Review app adoption, inventory accuracy, integration, staffing, and support ownership.	Which departments can maintain live information and fulfil digital requests consistently?
Set accurate expectations	Use availability qualifiers and avoid universal claims.	Capabilities are available at participating properties and may vary by service.
Close with next step	Agree readiness assessment, property owner, and onboarding discussion.	Let us validate inventory, service routing, support, and launch dependencies.

Recommended proof points

- A unified guest journey across supported services.
- Digital confirmation and visibility where available.
- The validated room-service flow includes visual menu discovery, order review, stored-payment checkout, confirmation, and tracking.
- Planning targets are directional and should not be presented as realised results.

9. Customer Support Playbook

Support objective	Recommended behaviour
Clarify the journey	Confirm whether the guest is ordering room service, booking a restaurant, reserving spa or activities, or viewing recommendations.
Confirm eligibility	Check active stay, participating property, supported service, service hours, and account access.
Protect payment data	Never request or repeat full card details. Use only approved payment and authentication processes.
Avoid duplicate transactions	Before suggesting a retry, verify whether an order, reservation, or payment record already exists.
Set service expectations	Explain that availability, timing, pricing, and status are managed by the participating property and service team.
Escalate with evidence	Capture the service category, property, time, visible status, error message, and transaction reference without collecting unnecessary personal data.

Standard support flow

1. Identify the exact service journey and the guest's current step.
2. Confirm the guest has an active stay and the property supports the selected service.
3. Check whether the transaction was created before asking the guest to retry.
4. Use the approved resolution or contact the responsible property team.
5. Document the outcome and escalate recurring or high-impact issues.

10. Known Issues and Limitations

Area	Known limitation or risk	Customer-facing guidance	Internal action
Property availability	Services and features may vary by participating property.	Confirm what is offered at the current hotel.	Verify property configuration and inventory ownership.
Sign-in and active-stay access	Guests without valid account access or an eligible active stay may not see My Concierge.	Confirm account access and current reservation details through approved support channels.	Escalate broad access failures as a high-impact incident.
Preparation-time visibility	Estimated preparation time may not appear before checkout in the initial experience.	Explain that timing is shown where available and confirm with the property if needed.	Track requests for the planned preparation-time enhancement.
Payment eligibility	Expired sessions, unsupported payment methods, or folio rules may block checkout.	Ask the guest to re-authenticate or use an available approved option.	Check payment eligibility and avoid duplicate retries.
Availability sync	Dining, spa, or activity inventory may change before confirmation.	Only confirmed reservations are guaranteed.	Investigate inventory freshness and integration latency.
Status delays	Order or service status may update later than the physical operation.	Verify directly with the responsible service team if status appears stale.	Log timestamp and route to the integration owner.
Recommendations	Suggested experiences may not remain available.	Treat suggestions as discovery, not guaranteed availability.	Review recommendation relevance and inventory linkage.
Dining adoption	Dining reservations currently underperform other service categories in the provided launch data.	Help guests distinguish restaurant bookings from room service.	Support the dining-discovery experiment and capture feedback.

11. Troubleshooting and Escalation

Issue	First checks	Do not do	Escalate to
My Concierge is missing	Confirm active stay, app access, participating property, and supported market.	Do not promise universal availability.	Account/app support; product operations if multiple guests are affected.
Service category is unavailable	Check property offering, service hours, capacity, and inventory status.	Do not create an unsupported reservation manually in the app.	Property service owner.
Checkout failed	Check session validity, payment eligibility, connectivity, and whether a transaction already exists.	Do not ask for full card details or repeatedly submit payment.	Payment/engineering support and property finance if charged.
Duplicate charge or order	Verify order and payment records and preserve references.	Do not advise another retry.	Payment operations and property finance urgently.
Reservation not confirmed	Check confirmation record, venue availability, and cancellation window.	Do not state that a pending request is confirmed.	Restaurant, spa, or activity owner.

Issue	First checks	Do not do	Escalate to
Tracking appears stale	Compare visible timestamp with operational status.	Do not guarantee the displayed estimate.	Property fulfilment team; engineering if recurring.
Privacy concern	Stop unnecessary data collection and record only required details.	Do not copy personal or payment information into free text.	Privacy/security and leadership based on severity.
Broad sign-in failure	Confirm scope, start time, affected properties, and reproducibility.	Do not treat as an isolated guest issue.	Incident lead, engineering, support leadership, and product.

Immediate escalation

Incorrect charges, duplicate payments, widespread sign-in failures, suspected privacy or security incidents, and legal-compliance concerns require urgent escalation.

12. Frequently Asked Questions

Question	Approved response
Is My Concierge free?	There is no separate access fee. Guests pay the normal price of any selected service or experience, including applicable charges and terms.
Is it available at every hotel?	My Concierge and individual service categories are available at participating properties and may vary by location.
Can a guest still contact hotel staff?	Yes. My Concierge is a convenient digital option and does not remove access to staff support.
What is the difference between room service and dining reservations?	Room service is delivered to the guest room. Dining Reservations books a table at a participating restaurant.
Can guests cancel or modify a booking?	Cancellation and modification depend on the service and property policy shown in the reservation details.
How does payment work?	Eligible transactions use an approved stored payment method or supported folio posting. Available methods and charges are shown before confirmation.
Are recommendations guaranteed to be available?	No. Recommendations help discovery; availability must still be confirmed.
What should Support do if a guest may have been charged twice?	Stop further retries, verify records, preserve transaction references, and escalate urgently to payment operations and property finance.
Can Sales promise a specific revenue increase?	No. Planning targets are directional. Property results depend on adoption, inventory, operations, and fulfilment quality.
What if the guest cannot sign in?	Use approved account-recovery steps, confirm the active stay, and escalate if the issue affects multiple guests or properties.

13. Service Standards and Measurement

Area	Metric or signal	Why it matters
Access	Activation rate and sign-in failures	Shows whether eligible guests can enter the experience.
Discovery	Category click-through and service-detail views	Shows whether guests find relevant inventory.
Conversion	Completed orders and reservations	Shows whether journeys create transactions.

Area	Metric or signal	Why it matters
Revenue	Average order or booking value and ancillary revenue	Shows commercial contribution.
Experience	Satisfaction, completion time, abandonment, and support contacts	Shows usability and trust.
Operations	Routine-call volume, fulfilment time, cancellations, and errors	Shows operational impact and service quality.
Reliability	Duplicate transactions, payment failures, stale status, and incident volume	Shows product and integration health.

Team readiness checklist

- Sales can explain the ideal customer, product value, three core features, pricing model, and rollout qualifications.
- Support can distinguish each service journey, confirm eligibility, protect payment data, avoid duplicate retries, and escalate correctly.
- Both teams use “at participating properties” and “where available” when capability varies.
- Both teams avoid presenting planning targets as realised production results.

Document status

Launch enablement draft. Product availability, operational procedures, contact paths, legal language, and final screenshots should be validated before rollout.
