

# My Concierge

Design Sprint

**Product Manager: Rafaela Pinheiro**

01

## Background

- Digital Gap: Over 67% of Hilton guests are logged into the Hilton Honors app, yet on-property requests still rely on analogue friction (phone calls and paper menus).
- The Missing Link: The app successfully handles pre-stay (booking, digital key), but lacks a native, seamless transactional experience during the stay.

02

## Problem

- The Revenue Loss: Analogue friction (busy lines, unanswered calls) costs hotels \$3.3B annually in lost ancillary spend.
- The TAM: Hilton loses \$15 per guest/night due to lack of digital convenience, representing a \$4.95B Total Addressable Market.
- Competitor Flaw: Marriott and Hyatt rely on fractured web-view redirects or phone confirmations. Hilton can lead with a native, single-token checkout.

03

## Goals

- Pilot Target: Achieve a 153% ROI in a 90-day, 5-hotel pilot (\$150K cost vs. \$379K return).
- Adoption: Reach an App Activation Rate > 45% and >30% Daily Active Users.
- Conversion: Hit a 15% digital conversion rate on requests, boosting Average Order Value (AOV) by +15%.
- Efficiency: Automate 30K front-desk calls, saving 1,500 labor hours.

# Understand

# How Might We

## INDIVIDUAL IDEATION

Eight opportunity statements generated for the My Concierge experience

How might we make guests aware of the virtual concierge immediately upon entering their room?

How might we design the in-app ordering process to be faster and easier than making a quick phone call?

How might we leverage past guest preferences to present highly relevant dining or spa choices at the perfect moment?

How might we build trust so that guests feel completely secure paying for premium services with a single tap?

How might we gently encourage guests to upgrade their room or extend their stay when external conditions change?

How might we transition traditional, passive paper menus into a dynamic digital exploration experience?

How might we seamlessly route guest requests directly to the right hotel department without adding friction to the front desk?

How might we extend the app's value beyond the physical hotel walls to capture revenue from local city experiences?

## Service Integration

How might we integrate all concierge services into a seamless experience within the app?

How might we make it easier for guests to customize their stay to their specific needs?

How might we seamlessly route guest requests directly to the right hotel department without adding friction to the front desk?

How might we enable guests to access concierge services without needing to contact hotel staff directly?

How might we understand which services are of most interest to our users?

How might we integrate human interaction with concierge staff within the user's digital experience?

How might we offer package deals within the app that bundle multiple concierge services for a discounted rate?

## Simplify Booking Experience

How might we connect users with concierge staff in case of any issues?

How might we offer guests a step-by-step guide to book complex services, like special events or multi-day experiences?

How might we help users to efficiently schedule activities, meals, etc. into their holiday plan?

How might we ensure the booking process is intuitive, requiring minimal steps for users?

How might we integrate a personalized calendar feature that syncs guest bookings with their preferred schedule?

How might we allow guests to easily modify or cancel bookings through the app?

How might we help users pick their preferred table in restaurants?

How might we design the in-app ordering process to be faster and easier than making a quick phone call?

## Payments and Check-In/Check-Out

How might we allow users to tip staff?

How might we create a seamless payment experience within the app for all concierge services?

How might we integrate mobile check-in and check-out with other services to streamline the guest experience?

How might we use a one-tap booking system for frequent services like room service and spa appointments?

How might we build trust so that guests feel completely secure paying for premium services with a single tap?

## Guest Preferences

How might we understand how much time guests want to dedicate to activities vs. working or just relaxing?

How might we leverage past guest preferences to present highly relevant dining or spa choices at the perfect moment?

How might we understand what services and activities are a must for our guest to experience?

How might we understand if returning guests want to experience something new or repeat experiences from their previous stay?

How might we use guests' past behavior to provide personalized recommendations?

How might we understand what cuisine guests prefer?

How might we collect user's preferences without friction?

## Dynamic suggestions

How might we offer dynamic recommendations that adapt throughout the guest's stay based on real-time data?

How might we suggest experiences that align with the guest's stay duration or reason for travel (business, leisure, family)?

How might we transition traditional, passive paper menus into a dynamic digital exploration experience?

How might we tailor room service and spa recommendations based on the guest's loyalty status?

How might we provide exclusive offers and promotions based on users preferences?

How might we gently encourage guests to upgrade their room or extend their stay when external conditions change?

## Other

How might we help users discover new Hilton hotels offering their preferred services?

How might we make guests aware of the virtual concierge immediately upon entering their room?

How might we extend the app's value beyond the physical hotel walls to capture revenue from local city experiences?

A clear focus connects the target user to the highest-value opportunity.

## 01 Primary user type

### Frequent Business Travelers & Hilton Honors Members (Checked-in Guests)

#### I selected this user type because

These guests already use the app for check-in and digital keys but face friction when ordering services via phone. They are tech-savvy, value their time, and represent the highest potential spenders for premium, on-property ancillary services if provided a seamless digital option.

## 02 Theme

### Payments and Streamlined Booking Experience

#### I selected this theme because

This theme targets the core business opportunity of capturing the \$3.3B lost revenue identified in the Initial PRD. Focusing the sprint on a native, single-token checkout and one-tap ordering is the most direct path to hitting our goals of +15% Average Order Value and a 153% pilot ROI.

# Define

## Hilton Honors App's New 'My Concierge' Fixes the Most Frustrating Part of Hotel Stays

### Hilton's new in-app transactional module is a game-changer for frequent business travelers

who are tired of analogue friction. Instead of navigating outdated paper menus or waiting on hold with a busy front desk, guests can now instantly order room service, request amenities, and book local experiences with a single tap. Customers love it because it respects their time, giving them complete, frictionless control over their stay directly from their pocket.

“

*I ordered room service and booked a spa treatment in under a minute without talking to a single human—it makes the entire hotel stay feel completely fluid and personalized.*

#### MY CONCIERGE

**A seamless digital stay, directly from the guest's pocket.**

# Success Metrics

HEART FRAMEWORK

| HEART        | Goals                                                                                                       | Signals                                                                                                     | Metrics                                                                                               |
|--------------|-------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| Happiness    | Guests feel empowered, relaxed, and highly satisfied with their fluid, on-property digital stay experience. | Guests leave positive in-app ratings and explicit positive feedback after completing transactions.          | <b>Average satisfaction rating</b> of 4.7/5 stars per user post-transaction.                          |
| Engagement   | Guests actively explore on-property offerings, local experiences, and dining options via the app.           | Guests spend time browsing digital menus and frequently add multiple items to their digital shopping cart.  | <b>Average screen time</b> spent on the concierge portal and average actions per active user session. |
| Adoption     | Checked-in guests quickly activate and perform their very first transactional request through the app.      | Guests complete their first in-app purchase or service booking within the first 2 hours of room entry.      | <b>Percentage of checked-in guests</b> making at least one native transaction during their stay.      |
| Retention    | Repeat guests consistently choose the in-app virtual concierge over traditional front-desk methods.         | Returning Hilton Honors members immediately reopen the transactional module upon checking into a new hotel. | <b>Average number of in-app orders</b> completed per multi-night guest stay.                          |
| Task Success | Guests seamlessly complete orders and payments without experiencing system friction or needing help.        | Guests successfully check out via the single-token flow with minimal cart abandonment and low order errors. | <b>Average completion time</b> per transaction and percentage of orders fulfilled under 20 minutes.   |

# Sketch

## KEY OBSERVATION

### Three themes shaped the final solution

- 01 Visual discovery**  
Replace static menus with an image-led service experience.

- 02 One-tap transactions**  
Reduce checkout effort through a stored payment method.

- 03 Live visibility**  
Show fulfilment progress without front-desk follow-up calls.

Selected concepts influenced the final solution

# Solution Sketch 1

Three-screen concept showing discovery, ordering, and live fulfilment

## SOLUTION LOGIC

### A complete ordering journey

01

#### Contextual landing

The experience begins with services relevant to the checked-in stay.

02

#### Visual selection

Guests browse and add items without calling the front desk.

03

#### Live fulfilment

Tracking closes the information gap after the order is placed.

# Solution Sketch 2

SINGLE-TOKEN CHECKOUT + TIPPING

Three-screen concept showing review, tipping, and payment confirmation

## SOLUTION LOGIC

### Frictionless checkout

#### 01 Transparent review

A unified cart displays charges and the securely stored payment method.

#### 02 Integrated tipping

Preset and custom gratuity options simplify staff recognition.

#### 03 Swipe to confirm

Single-token checkout removes card re-entry and confirms payment immediately.

# Decide

The concept selected for prototyping and validation

SELECTED SOLUTION

## One-Tap In-Room Service Ordering

PROTOTYPE FOCUS

### WHY THIS CONCEPT

**This sketch was selected because it targets the exact point where analogue friction occurs: the ordering process.** Our PRD highlights that hotels lose billions because guests abandon orders when forced to use paper menus or wait on busy telephone lines. Prototyping this specific interface allows us to test if a highly visual, instant-ordering flow can successfully eliminate that initial friction for busy travelers. By cracking the user experience of how a guest selects and submits a request in seconds, we directly unlock the path to increasing conversion rates and boosting Average Order Value.

Ordering friction → testable prototype → conversion and AOV opportunity

### DECISION LOGIC

01

#### Critical friction

Targets the ordering moment where analogue channels create delay and abandonment.

02

#### Prototype fit

Creates a focused interaction that can be tested through a visual, instant-ordering flow.

03

#### Business value

Directly supports conversion growth and higher Average Order Value.

# Prototype

# Storyboard

## ■ Outside Software: The Problem

### Script

Guest arrives late and wants room service, but he is tired, so he doesn't want the friction of phone calls or physical menus.

## ■ App Entry: The Trigger

### Script

Contextual in-app trigger prompts the guest to launch the "My Concierge" ordering module instantly.

## ■ Visual Exploration: The Menu

### Script

Guest browses a dynamic, highly visual digital menu that replaces traditional paper menus.

# Storyboard

## ■ Fast Customization: The Selection

### Script

Guest easily customizes their order with a few taps, eliminating verbal miscommunications.

## ■ One-Tap Confirmation: Transaction

### Script

A simplified checkout screen. It securely pulls their pre-saved Hilton Honors payment token. At the bottom, a large action button reads: "Swipe Right to Order Now".

## ■ Live Fulfillment: The Tracking

### Script

An active tracking screen like a food delivery progress bar. It displays order status from beginning to deliver, so guest can follow without the need to call from desk.

# Storyboard

## ■ Outside Software: The Resolution

### Script

Frictionless delivery is completed.  
The guest enjoys a seamless on-property experience, driving loyalty and ancillary spend.

## My Concierge: One-Tap In-Room Service Ordering

01

### Description

The prototype demonstrates a frictionless in-room dining experience through the My Concierge module within the Hilton Honors app. Guests can browse room service options, review a selected menu item, complete their purchase using a stored payment method, and track delivery progress in real time without needing to call the front desk. The solution aims to reduce operational friction, improve guest convenience, increase digital adoption, and drive incremental on-property revenue.

02

### Assumptions

- The guest is already checked into the hotel and has access to the Hilton Honors app.
- The guest has an active digital room key linked to their stay.
- Payment details are already securely stored within the Hilton Honors profile.
- The hotel's order management system can receive and process orders submitted through My Concierge.
- Real-time order status updates are available and can be displayed within the application.
- Guests have internet connectivity through hotel Wi-Fi or mobile data.
- Pricing, availability, and menu content are maintained by hotel operations.

03

### Tasks

- Access the My Concierge room service experience from the Hilton Honors app.
- Browse available room service offerings through a visual, image-led menu.
- Select a food item and add the preconfigured selection to the order.\*
- Review order details and pricing before submission.
- Complete a secure one-tap checkout using a stored payment method.
- Track order preparation and delivery status in real time.
- Return to the home screen after placing an order.

# Validate

## One-Tap In-Room Service Ordering

PM

Rafaela Pinheiro

STATUS

Draft

### 01 Objectives

The research aims to validate whether guests can successfully complete a room service order using the My Concierge module without assistance.

- Can guests easily identify how to access room service through the Hilton Honors app?
- Is the ordering process intuitive and easy to navigate?
- Can users clearly understand the selected item and locate the action to add it to their order?
- Does the one-tap checkout process feel simple and trustworthy?
- Do users find the real-time delivery tracking valuable?
- Would users prefer this experience over calling the front desk?

### 02 Methodology

Moderated usability testing sessions using an interactive Figma prototype.

Participants will be asked to complete a series of realistic room service ordering tasks while thinking aloud.

Sessions will last approximately 15–20 minutes and include:

01 Introduction

02 Background questions

03 Task-based prototype testing

04 Follow-up discussion

03

### Participants

#### Target users:

- Hotel guests who frequently travel for business and are Hilton Honors members
- Users familiar with mobile applications and digital payments
- Adults who have previously ordered room service or hotel services during a stay

TARGET SAMPLE SIZE

5 participant

## My Concierge: One-Tap In-Room Service Ordering

01

### Introduction

Thank you for participating today. I'm testing a prototype for a new room service experience within the Hilton Honors app. This is not a test of you. We're testing the prototype, so please be honest and open about anything you find confusing or frustrating. As you go through the tasks, please tell me what you're looking at, what you're expecting to happen next, and anything that surprises you. The session should take approximately 15–20 minutes.

03

### Tasks Setup

Before we begin:  
The prototype may not be fully functional.  
Please interact with it as naturally as possible and explain what you are thinking as you move through each step.

02

### Background Questions

- How often do you stay in hotels?
- Do you usually travel for business, leisure, or both?
- Have you ever ordered room service at a hotel?
- How do you normally place room service orders?
- Have you used hotel mobile apps before?
- How comfortable are you using mobile payment solutions?

01

Introduction

02

Background

03

Prototype Tasks

04

Wrap Up

## My Concierge: One-Tap In-Room Service Ordering

01

### Task 1

#### SCENARIO

You have just arrived at your hotel room after a long day of travel and would like to order dinner without calling the front desk.

Please show how you would place a room service order.

#### FOLLOW-UP QUESTIONS

- Was it easy to find room service?
- What did you expect to happen next?
- Was anything confusing?

02

### Task 2

#### SCENARIO

You have selected a meal and are ready to continue with your order.

Please add the item to your order, review the order details, and complete the checkout process.

#### FOLLOW-UP QUESTIONS

- Was it clear how to add the item to your order?
- Did the order review screen provide the information you expected?
- Did the payment process feel simple and straightforward?
- At any point, were you unsure what to do next?
- How confident would you feel placing a real order using this process?

Final feedback to understand overall perception, future use, and opportunities to improve.

## Final Feedback

Close the session by inviting the participant to reflect on the complete experience.

### LISTEN FOR

- Overall impression
- Most valuable moment
- Unresolved confusion
- Future-use intent
- Improvement ideas

01

### Overall Experience

- What was your overall impression of the experience?
- What did you like most?
- What was the most confusing part?

02

### Future Usage

- Would you use this feature during a hotel stay?
- Would this experience be preferable to calling the front desk?
- How could the experience be improved?

**Thank you for your participation and feedback.**

# User Testing: Key Findings

VALIDATION | 1 PARTICIPANT

Findings reflect one moderated usability session.

[Click here to listen interview](#)

## What worked well

Room Service was found immediately and matched the participant's expected location.  
The participant completed both tasks without assistance or uncertainty.  
The order summary showed the expected item and payment information.  
Stored payment made checkout feel simple, familiar, and trustworthy.  
The participant rated confidence at 5/5 and preferred the app to calling.

## Where the participant got stuck

No major usability blockers or navigation problems were observed.  
The participant repeatedly stated that nothing was confusing and always knew what to do next.

## Other observations

Speed was the strongest benefit: the participant moved from service entry to order confirmation very quickly.  
The flow felt familiar because it resembled food-delivery apps.  
The participant would use the feature on work trips to save time.  
Two enhancement opportunities emerged: show preparation time earlier and add purchase-based recommendations.

Evidence captured from the moderated prototype session

## Participant Context

Travels for work once or twice a month and usually stays in business hotels for a few nights. Has ordered room service several times, particularly after late meetings or when staying in the hotel.

Usually reviews a paper menu and calls the front desk or uses the room phone.

Uses hotel apps for reservations, mobile check-in, and room information.

Very comfortable with mobile payments and trusts stored payment methods in reputable apps.

## Task 1: Discover Room Service

Opened the app, selected Room Service, viewed the menu, and chose the burger option without assistance.

Said the Room Service option “stood out immediately.”

Expected a menu or ordering screen and said the result matched that expectation.

Described the navigation as simple and the flow as logical.

Reported no confusion and always knew the current step.

## Task 2: Checkout and Tracking

Added the burger, reviewed the order summary, proceeded, confirmed the order, and reached tracking.

The Add to Order button was easy to identify. The review screen included the selected item and amount to pay.

Stored payment removed the need to enter credit-card information.

Rated confidence at 5/5 and compared the process with food-delivery apps.

## Overall Feedback

Described the experience as convenient and modern.

Most valued the speed from opening the service to placing an order.

Would use the feature during work trips because it saves time.

Preferred the app to calling because calls may involve waiting or repeating information.

Considered the concept a useful addition that makes room service more accessible and aligned with current digital-service habits.

## Suggestions and Supporting Quotes

*“The flow guided me in a natural way from one step to the next.”*

### IMPROVEMENT 1

Show estimated preparation time before ordering.

### IMPROVEMENT 2

Add recommendations based on previous purchases.

# Handoff

## My Concierge: One-Tap In-Room Service Ordering

### 01 Background

Hilton Honors already supports reservations, mobile check-in, and digital room access. During the stay, however, guests may still rely on paper menus, room phones, and front-desk calls to request services or place room-service orders.

The interview participant confirmed familiarity with this process and also reported regular use of hotel apps and stored mobile payment methods.

### 02 Problem

Frequent business travelers may want to order room service quickly after arriving late or completing a long working day. The traditional process introduces avoidable friction because guests must locate a paper menu, call the hotel, wait for assistance, and communicate the order verbally.

The opportunity is to provide a native transactional experience within the Hilton Honors app that allows checked-in guests to discover room service, review menu options, place an order using a stored payment method, and monitor fulfilment without contacting the front desk.

### 03 Goals

- Enable checked-in guests to discover and start a room-service order without assistance.
- Reduce the steps required to place and pay for an order.
- Provide clear order and pricing information before confirmation.
- Enable secure checkout using payment details stored in the Hilton Honors profile.
- Give guests visibility into order status after confirmation.
- Reduce reliance on room phones and front-desk calls.
- Provide an experience aligned with familiar food-delivery patterns.
- Support digital-service adoption and incremental on-property spend.

#### USER-TESTING VALIDATION

### Core journey validated

- Room Service found immediately
- Both tasks completed independently
- No major usability blockers reported
- Confidence rated 5/5
- App preferred over calling

## Core UX Flow and Key Features & Scope
