1. Executive Summary

My Concierge is a virtual concierge experience within the Hilton Honors mobile app. It enables checked-in guests to request room service, book spa treatments and hotel activities, make dining reservations, and receive relevant recommendations for local attractions. The product reduces dependence on paper menus, phone calls, and front-desk coordination while creating a unified digital channel for discovery, booking, payment, confirmation, and fulfilment.

2. Background

Hotel guests increasingly use mobile applications for booking, check-in, loyalty management, and digital room access. Many on-property transactions still rely on paper menus, phone calls, manual confirmation, and fragmented systems. My Concierge extends the digital relationship into the stay through room-service requests, spa and activity booking, dining reservations, and personalized local recommendations.

3. Problem Statement

Checked-in guests may need to search for paper information, call the front desk or restaurant, wait for assistance, and verbally confirm service details. For hotels, fragmented channels reduce service discoverability, create missed conversion opportunities, and increase repetitive staff interactions. The opportunity is one mobile destination where guests can discover, reserve, order, pay for, and monitor relevant services without abandoning the hotel app.

Launch objective
Make the guest experience more seamless and increase revenue from concierge services through stronger digital discovery, transaction completion, and contextual cross-selling.

Product context
My Concierge is an independent product concept developed for launch planning. Hilton and Hilton Honors provide the hospitality context; no affiliation, endorsement, or production deployment is implied.

4. Product Goals

Goal	Definition
Seamless self-service	Enable guests to complete common concierge transactions without calling hotel staff.
Digital adoption	Make My Concierge the preferred mobile access point for on-property services and reservations.
Revenue growth	Increase bookings, transaction value, upgrades, and future partner commissions.
Operational efficiency	Reduce routine calls and manual routing while sending requests to the correct team.
Relevant discovery	Use stay context and permitted preferences to surface useful offers.
Trust and reliability	Provide secure payment, confirmation, status visibility, privacy protection, and accessible interactions.

5. Target Market

Primary users

- Checked-in Hilton guests with access to the Hilton Honors app.
- Frequent business travellers who value speed, predictability, and mobile self-service.
- Digitally engaged loyalty members familiar with digital keys and stored payment methods.

Secondary users

- Leisure travellers, couples, and families seeking dining, wellness, activities, and local experiences.
- Returning guests who may benefit from preference-aware recommendations and quicker repeat transactions.

Customers and launch stakeholders

- Participating hotels and resorts.
- Food and beverage, spa, activities, concierge, front desk, housekeeping, finance, and support teams.
- Approved local-experience partners in future marketplace phases.

Initial launch market

A controlled group of participating properties with mature app adoption, stable service operations, and reliable inventory integration. Initial onboarding should prioritize hotels with meaningful dining, room-service, spa, and activity offerings.

6. Key Features and Scope

Feature	Description	Why it matters
In-App Service Ordering	Visual room-service and amenity ordering, transparent review, stored payment, confirmation, and tracking.	Reduces phone-ordering friction and provides a validated transaction foundation.
Reservations and Activities	Dining, spa, cabana, fitness, and activity availability and booking.	Extends My Concierge into scheduled hotel services.
Personalized Recommendations	Relevant hotel and local suggestions based on stay context and available preferences.	Improves discovery and contextual cross-selling.
Confirmation and Visibility	Reservation details, estimated timing, and status updates where supported.	Builds trust and reduces follow-up calls.
Unified Payment and Folio Integration	Eligible purchases use stored payment or secure folio posting.	Creates a consistent transaction experience and reduces manual entry.

Launch scope

- Room service and amenity ordering.
- Dining reservations at participating restaurants.
- Spa and hotel-activity reservations.
- Personalized hotel and local recommendations.
- Confirmation, payment, and status visibility where supported.

Out of scope for initial launch

- Fully autonomous trip planning.
- Robotic fulfilment without supported property hardware.

- A broad external marketplace without approved integrations.
- Replacing human concierge support for complex guest needs.

7. Core UX Flows

A. Order room service

- Open Hilton Honors during an active stay and select My Concierge.
- Select Room Service and browse the visual menu.
- Review an item and add it to the order.
- Review charges, room details, and stored payment method.
- Confirm payment and receive confirmation.
- Track preparation and delivery.

B. Book dining, spa, or activities

- Choose Dining, Spa, or Activities.
- Review venues, services, dates, and times.
- Select an option and provide required details.
- Review price and cancellation terms.
- Confirm and view reservation details.

C. Discover a recommendation

- Open My Concierge or receive a contextual prompt.
- Review a hotel service or local recommendation.
- Open the experience.
- Reserve, purchase, save, or request assistance.

8. Success Metrics

Category	Metric	Definition	Planning target
Adoption	Activation rate	Checked-in guests opening My Concierge	>45%
Engagement	Daily active-user rate	Checked-in guests interacting daily	>30%
Discovery	Feature click-through rate	Users opening a service category	>25%
Conversion	Digital concierge conversion	Eligible stays with a completed paid order or reservation	15%
Revenue	Average order / booking value	Average value of completed transactions	+15% vs. baseline
Revenue	Ancillary revenue / occupied night	Incremental concierge revenue divided by occupied nights	+$2.50
Operations	Routine-call reduction	Change in related front-desk and service-team calls	-20%
Experience	Post-transaction satisfaction	Average rating after a completed service	4.7 / 5
Speed	Room-service fulfilment	Confirmation to delivery	<20 minutes where feasible

Targets are planning assumptions and should be calibrated through pilot baselines, property operating constraints, and legal and commercial approval.

9. Total Addressable Market

The TAM estimates the annual ancillary value that a frictionless digital concierge could influence across the Hilton network. It is a market-sizing model, not a revenue forecast.

Input	Value	Source / rationale
Global room base	1.4M rooms	Hilton 2025 Year in Review.
Days per year	365	Calendar input.
Occupancy	67%	Planning assumption retained from the earlier product model.
Occupied room nights	1.4M x 365 x 67% = 342.4M	Derived calculation.
Addressable value / night	$15	Planning assumption for value not captured because of digital friction.
Estimated TAM	342.4M x $15 = $5.14B	Rounded annual estimate.

TAM estimate

$5.14 billion annually. This represents the potential value pool the product could influence; it does not assume the full amount can be captured.

10. Competitive Landscape

Major hotel loyalty ecosystems are the closest strategic competitors. Product-level concierge revenue is not publicly separated, so company revenue and loyalty membership are used as transparent scale proxies.

Competitor	Scale estimate	Revenue proxy	Product comparison
Marriott Bonvoy	Nearly 271M members at year-end 2025	$26.19B annual revenue, company-wide proxy	Mobile food and beverage at selected properties; partial spa and activity journeys; partnership-based local experiences.
World of Hyatt	About 63M members in 2025	$7.101B annual revenue, company-wide proxy	Strong premium service integration; varying spa availability; emerging automated guest requests.

Company revenue is shown only as a scale proxy and is not presented as concierge-product revenue.

Positioning advantage

- One native service journey rather than phone calls or external redirects.
- Stored-payment and folio integration across ordering and reservations.
- Preference-aware and context-aware recommendations across the stay.
- Potential marketplace economics through approved partner integrations.

11. Acquisition Channel Strategy

Channel	Description	Why selected
Hilton Honors app and release communication	Feature placement in the existing app, release notes, and app-store presence.	Reaches digitally engaged guests through a trusted, owned entry point.
Check-in email and contextual push	Messages after check-in, room assignment, arrival, and relevant stay moments.	Targets guests when services are most useful and can deep-link to the experience.
In-room QR and digital collateral	QR placement near the phone, menu, TV welcome screen, or service information.	Converts traditional in-room touchpoints into product discovery.
Front-desk and digital-key onboarding	A short mention during arrival or in the mobile check-in completion flow.	Explains the benefit before the first service need.
Wi-Fi portal and property signage	Property-specific promotion on Wi-Fi and participating hotel screens.	Provides repeated, location-aware exposure.

12. Pricing and Revenue Strategy

Revenue goal

Increase concierge-service transaction volume and value while reducing service-channel friction. Initial targets are 15% digital conversion, a 15% increase in average order value, and approximately $2.50 in incremental ancillary revenue per occupied night at participating properties.

Pricing strategy

- No separate access fee for guests using My Concierge.
- Guests pay the existing price of the selected service, meal, activity, upgrade, or experience.
- Property taxes, service charges, tips, cancellation terms, and eligibility are shown before confirmation.
- Participating hotels retain control of inventory and pricing.
- Future local-experience transactions may generate a 10% to 15% affiliate or marketplace commission, subject to commercial validation.
- Launch offers may be property-funded, but discounts are not required for the core proposition.

13. Pre-Launch Checklist

Team	Required discussion
Product Management	Scope, readiness, owners, metrics, rollout gates, and decision log.
Engineering	Release plan, integrations, observability, rollback, feature flags, and incidents.
QA	Functional, regression, security, accessibility, property tests, and open defects.
UX / Design	Flows, errors, accessibility, copy, visuals, and handoff.
Data / Analytics	Event tracking, dashboards, metric definitions, experiment assignment, and data quality.
Hotel Operations	Inventory, routing, hours, staffing, service levels, and escalation.
F&B / Spa / Activities	Menus, availability, capacity, pricing, cancellations, and fulfilment.
Marketing	Positioning, channel plan, assets, audience rules, and calendar.

Team	Required discussion
Sales / Owner Relations	Property value story, onboarding, pricing explanation, and qualification.
Customer Support	Knowledge articles, known issues, escalation, and contact monitoring.
Legal / Privacy / Security	Consent, personalization, payment, partner terms, retention, and accessibility.
Finance	Folio posting, payment reconciliation, refunds, commissions, taxes, and reporting.
Leadership	Readiness, residual risks, mitigations, recommendation, and stop criteria.

14. Launch Risks and Mitigations

Risk	Severity	Impact	Mitigation
Payment or folio failure	High	Incorrect charge, failed transaction, or duplicate order.	Idempotent order creation, eligibility checks, masked data, reconciliation, clear retry states, and refund escalation.
Operations not ready	High	Demand exceeds capacity or routes incorrectly.	Launch only at qualified properties; validate hours, inventory, routing, staffing, and pause controls.
Privacy or regulatory gap	High	Legal and trust exposure.	Legal and privacy review, data minimization, consent, retention controls, and launch blocking where incomplete.
Sign-in or access failure	High	Guests cannot use any concierge capability.	Authentication monitoring, active-stay testing, recovery guidance, and incident escalation.
Stale availability or tracking	Medium	Unavailable times or delayed status.	Real-time availability where possible, timestamps, stale-state alerts, retry logic, and human escalation.
Low dining adoption	Medium	Dining remains less discoverable than spa and activities.	Run the dining-discovery experiment in Section 17 and update placement and messaging.

15. Supporting Launch Documents

Document	Link	Purpose
Marketing Guide	View Marketing Guide	Positioning, audience, features, benefits, channels, and campaign guidance.
Sales and Customer Support Training Guide	View Training Guide	Product knowledge, pricing, known issues, troubleshooting, and escalation.
User Guide	View User Guide	Guest-facing instructions for room-service ordering and reservations.

Document	Link	Purpose
Launch Email	View Launch Email	Launch background, key features, rollout information, resources, and call to action.

16. Post-Launch Performance

Week	Users	Bookings / night	Revenue / night
1	100	0.8	$40
2	300	0.9	$50
3	500	0.9	$45
4	500	1.2	$60
5	600	1.5	$70

Initial interpretation

- Users increased from 100 to 600.
- Average bookings per night increased from 0.8 to 1.5.
- Average revenue per night increased from $40 to $70, with a temporary Week 3 decline.
- Overall indicators improved, but category adoption was uneven.

Feature category	Share completed through app
Dining reservations	30%
Spa reservations	65%
Activity reservations	72%

Identified problem
Dining adoption is 35 percentage points below spa and 42 percentage points below activities. Improved discovery and availability visibility should be tested.

17. Dining Reservation Experiment

Proposed solution

Introduce a contextual Dining Tonight module on the My Concierge homepage. The module separates restaurant reservations from room service, surfaces available restaurants and times, and provides one clear Reserve a Table action.

Arm	Experience
Control	Current homepage and dining-reservation placement.
Variant A	Prominent Dining Tonight card with imagery and a clear action.
Variant B	Variant A plus the next available reservation times.

Arm	Experience
Variant C	Variant B plus a relevant recommendation based on time, stay context, and permitted preferences.

Success metric

Primary metric: completed dining reservations divided by eligible users exposed to the assigned experience.

- Dining-card click-through rate.
- Reservation completion rate.
- Time to complete.
- Abandonment rate.
- Dining revenue per eligible guest.
- Cancellation and support-contact rates as guardrails.

Hypothesis
If My Concierge presents dining reservations prominently and shows relevant availability at the right moment, completed dining reservations per eligible exposed user will increase because the journey is easier to discover, understand, and complete.

Decision rule

Select a winning experience only if the primary metric improves reliably without unacceptable increases in cancellations, support contacts, or booking errors. Data Science should determine sample size, duration, and statistical threshold from baseline traffic and conversion data.

18. Assumptions and Sources

Key assumptions

- The $15 addressable value per occupied night is a planning assumption, not a reported Hilton metric.
- The 67% occupancy input is retained from the earlier product model.
- Success targets and the future partner take rate are product-planning assumptions.
- Competitor company revenue is used only as a scale proxy.
- Post-launch data and adoption percentages come from the provided launch scenario.
- Earlier room-service research involved one participant and is directional.
