ORGANIZATION LAUNCH ANNOUNCEMENT

Subject: Introducing My Concierge: Your Stay. Simplified.

Hello everyone,

Why we developed My Concierge

Hotel guests increasingly use mobile tools for booking, check-in, loyalty management, and digital room access, but many on-property service interactions still depend on paper menus, phone calls, manual confirmation, and separate service channels. These fragmented journeys can make services harder to discover, create unnecessary waiting and follow-up, and increase repetitive coordination for hotel teams.

We developed My Concierge to extend the digital guest experience into the stay itself. The goal is to give checked-in guests one convenient mobile destination for discovering, ordering, reserving, confirming, and monitoring supported services while helping participating properties improve service visibility and operational routing.

What we launched

My Concierge is a virtual concierge experience within the Hilton Honors app for checked-in guests at participating properties. The launch brings together the following capabilities:

✓ **In-App Service Ordering**
Guests can browse visual room-service and amenity options, review charges, use an eligible stored payment method or folio posting, receive confirmation, and track fulfilment where supported.

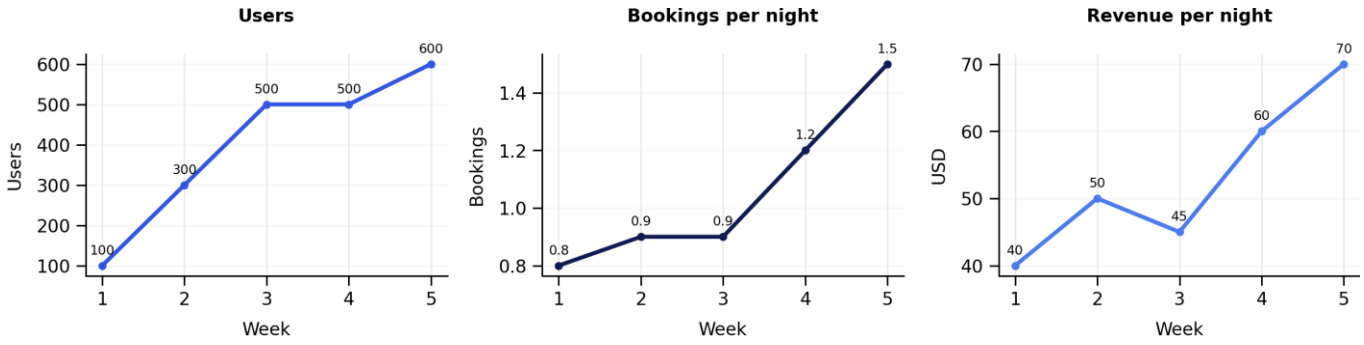

✓ **Reservations and Activities**
Guests can review availability and reserve dining, spa, fitness, cabanas, and hotel activities from one experience.

✓ **Personalized Discovery**
Guests can see relevant hotel services and local suggestions based on stay context and permitted preferences, helping reduce search effort and improve service discovery.

✓ **Confirmation and Visibility**
Order details, reservation information, estimated timing, and live status are available where supported, giving guests clearer next steps after a transaction.

Initial launch performance

The first five weeks show encouraging growth in usage and commercial activity. Users increased from 100 in Week 1 to 600 in Week 5. Average bookings per night increased from 0.8 to 1.5, and average revenue per night increased from $40 to $70. Revenue temporarily declined to $45 in Week 3 before increasing in Weeks 4 and 5.

Five-week launch results: users, average bookings per night, and average revenue per night.

Category adoption

30%	65%	72%
Dining reservations	**Spa reservations**	**Activity reservations**

Dining adoption is currently lower than spa and activity adoption, giving us a clear opportunity to improve dining discovery and availability visibility.

Next steps

- Continue monitoring activation, conversion, transaction value, satisfaction, support contacts, fulfilment performance, and service reliability.
- Run the Dining Tonight discovery experiment to test more prominent placement, clearer availability, and a direct Reserve a Table action.
- Use launch data and property feedback to refine service presentation, inventory visibility, and operational support.
- Expand only through participating properties that meet readiness requirements for inventory, routing, staffing, payment, privacy, and customer support.

Thank you to everyone who contributed across Product Management, UX and Design, Engineering, Data Science, QA, Hotel Operations, Food and Beverage, Spa and Activities, Marketing, Sales and Owner Relations, Customer Support, Legal, Privacy, Security, Finance, and Leadership.

Rafaela Pinheiro,
On behalf of the My Concierge cross-functional launch team
