

My Concierge

Managing Product Development

Product Manager: Rafaela Pinheiro

Test Plan

Test Cases: Functional Requirements

TEST PLAN | FUNCTIONAL

Six cases across four P0 features from the My Concierge Updated PRD

Feature	Steps	Expected Behavior	Priority
Contextual Room Service Entry	1. Sign in with an active hotel stay. 2. Open My Concierge. 3. View available services.	Room Service appears prominently and opens the menu for the guest's current property and room.	P0
Visual Digital Menu	1. Open Room Service. 2. Browse available items. 3. Select the burger.	The menu shows item images, names, prices, and availability; selecting the burger opens its item-review screen.	P0
Item Selection and Add to Order	1. Open the burger item. 2. Review the preconfigured selection. 3. Select Add to Order.	The selected item is added once to the active order and the guest advances to the order summary.	P0
Transparent Order Review	1. Add the burger to the order. 2. Open the order summary. 3. Review charges and payment method.	The summary displays the selected item, quantity, fees, total price, room details, and masked stored-payment method before confirmation.	P0
Single-Token Checkout	1. From the order summary, select Proceed. 2. Authorize the stored-payment checkout. 3. Wait for confirmation.	The payment is authorized without card re-entry; one order is created and a successful confirmation is shown.	P0
Confirmation and Live Tracking	1. Complete checkout. 2. Open Track Order. 3. Observe status updates.	The tracker shows the correct order, estimated delivery time, and ordered stages: Received, Preparing, On the way, and Delivered.	P0

Test Cases: Non-Functional Requirements

Four measurable constraints covering performance, reliability, security, and accessibility

Requirement	Steps to Reproduce and Acceptance Criteria	Priority
Performance: Menu and checkout response	1. Use a production-like build on supported Wi-Fi and 4G connections. 2. Open Room Service 20 times and advance from order summary to checkout 20 times. 3. Capture response times. Acceptance: 95% of menu and checkout screens become interactive within 2 seconds; no request exceeds 4 seconds.	P0
Reliability: No duplicate orders or payments	1. Create an order and rapidly select the checkout confirmation twice. 2. Repeat while switching between Wi-Fi and mobile data. 3. Check the order and payment records. Acceptance: exactly one order and one payment are created; interrupted requests recover or show a clear retry state.	P0
Security and privacy: Stored payment protection	1. Complete checkout using a stored payment method. 2. Review all customer-facing screens, logs, and error messages. 3. Attempt to reopen checkout after the session expires. Acceptance: only masked card details are displayed; no full payment data appears in logs; an expired session requires re-authentication.	P0
Accessibility: Core flow operability	1. Enable the device screen reader and larger text. 2. Complete Entry → Menu → Add to Order → Checkout → Tracking. 3. Check focus order, labels, contrast, and text resizing. Acceptance: all controls have meaningful labels, logical focus order, visible focus, and remain usable at 200% text size without clipped critical content.	P1

P0 = launch-critical | P1 = important quality requirement

Dogfood Survey

Overall usability, value, and expectations for My Concierge

01 How easy was it to find the Room Service option within My Concierge?

RATING SCALE

- ☐ Very difficult ☐ Easy
- ☐ Difficult ☐ Very easy
- ☐ Neutral

02 Did the navigation feel intuitive throughout the ordering process?

YES / NO

- ☐ Yes
- ☐ No

03 How would you rate your overall experience using My Concierge?

RATING SCALE

- ☐ 1 – Very poor ☐ 4
- ☐ 2 ☐ 5 – Excellent
- ☐ 3

04 Which part of the experience did you find most valuable?

MULTIPLE CHOICE

- ☐ Finding Room Service ☐ Order tracking
- ☐ Browsing the menu ☐ Overall convenience
- ☐ Checkout

05 Did the experience meet your expectations for a hotel mobile app?

MULTIPLE CHOICE

- ☐ Yes
- ☐ No
- ☐ Partially

06 Please explain your overall-experience rating.

OPEN TEXT

Detailed feedback on the Add to Order, checkout, and live-tracking experience

07 Was the Add to Order action clear and easy to understand?

YES / NO

- ☐ Yes
☐ No

08 How easy was it to review your order before checkout?

RATING SCALE

- ☐ Very difficult
☐ Difficult
☐ Neutral
☐ Easy
☐ Very easy

09 The stored-payment checkout process felt secure and trustworthy.

RATING SCALE

- ☐ Strongly disagree
☐ Disagree
☐ Neutral
☐ Agree
☐ Strongly agree

10 How useful was the live order-tracking feature?

RATING SCALE

- ☐ Not useful
☐ Slightly useful
☐ Moderately useful
☐ Very useful
☐ Extremely useful

11 Did you encounter any issues during the ordering or checkout flow?

YES / NO

- ☐ Yes
☐ No

12 If you encountered an issue, please describe what happened and where.

OPEN TEXT

Likelihood to use, recommend, and improve My Concierge

13 Would you use My Concierge during a future hotel stay?

RATING SCALE

- ☐ Definitely not
- ☐ Probably yes
- ☐ Probably not
- ☐ Definitely yes
- ☐ Not sure

14 Would you prefer this experience over calling the front desk?

YES / NO

- ☐ Yes
- ☐ No

15 How likely are you to recommend My Concierge to another hotel guest?

0-10 SCALE

0 1 2 3 4 5 6 7 8 9 10

16 What additional feature would most improve your experience?

Prioritize

Scenario	Who	Communication Method	Key Messages
QA finished testing and reported that 3 test cases failed	QA Lead Tech Lead Engineers	MEETING	Review the failed cases and severity. Assign a fix owner and target date. Confirm launch impact and retest plan.
An engineer is ready to start working on the next feature, but does not have the mocks	Designer Engineer	PING	Flag that development is blocked. Request the mock delivery ETA. Confirm requirements and any temporary workaround.
Support flagged that many users are unable to sign in to their accounts	Support Lead Tech Lead Engineers Leadership Team	MEETING	Treat as a high-impact incident. Confirm scope, affected users, and root-cause owner. Agree mitigation, user communication, and update cadence.
Dogfood survey results are in and dogfooders are not excited about recommending the product	Researcher UX Lead Designer Product Team	DOC	Summarize scores, comments, and recurring themes. Identify top experience gaps. Propose prioritized improvements, owners, and follow-up validation.
Legal informed you about a new law going into effect that requires new privacy controls before launch	Lawyer Tech Lead Engineers Leadership Team	MEETING	Clarify legal requirements and effective date. Assess compliance gaps and launch risk. Agree implementation owners and whether timing must change.
A new PM joined the team and wants to learn about the work	New PM	DOC	Share product vision, PRD, prototype, and roadmap. Summarize current status, decisions, risks, and milestones. List key stakeholders and schedule follow-up questions.

Unique ranking from 1 (most urgent) to 6 (least urgent), based on launch risk and impact.

Scenario	Priority Ranked	Rationale
QA finished testing and reported that 3 test cases failed	3 IMPORTANT	Potential defects may affect launch-critical functionality. Review severity, fix the failures, and retest before launch.
An engineer is ready to start the next feature but does not have the mocks	4 IMPORTANT	Blocks one development workstream and slows delivery. Request the mock ETA and agree a temporary workaround if possible.
Support flagged that many users are unable to sign in to their accounts	2 CRITICAL	Users cannot access any My Concierge capability without sign-in. Treat as a customer-impacting incident and restore access quickly.
Dogfood results are in and dogfooders are not excited about recommending the product	5 LOWER	Signals an experience or value gap that should be investigated. Important input, but less urgent than compliance, access, quality, or active delivery blockers.
Legal reported a new law requiring privacy controls before launch	1 CRITICAL	A compliance gap can prevent the product from launching legally. Clarify requirements immediately and update scope, owners, and launch timing.
A new PM joined the team and wants to learn about the work	6 LOWER	Onboarding supports long-term team effectiveness but does not resolve an immediate product risk. Share documentation now and schedule deeper onboarding after urgent issues are stabilized.

Prioritization logic: Compliance → Customer Access → Product Quality → Delivery Blocker → Product Feedback → Knowledge Transfer

Go No Go

Smart dining. Seamless stay.

My Concierge enables checked-in guests to discover room service, browse a visual menu, add an item, pay using a stored payment method, and track fulfilment in real time.

The experience removes friction from phone-based ordering, saves guest time, and creates a native digital channel for on-property services.

KEY FEATURES

01

Visual Room-Service Ordering

Find Room Service, browse an image-led menu, and add an item.

02

Single-Token Checkout

Review the order and pay using the stored Hilton Honors payment method.

03

Order Confirmation and Live Tracking

Confirm the order and follow fulfilment through delivery.

Feature 1: Visual Room-Service Ordering

READY TO LAUNCH

Testing and Dogfood Feedback

TESTING (QA)

All functional cases for entry, menu, and Add to Order passed.
No blocking defects remain.

DOGFOOD

Room Service was easy to find.
Visual menu and clear primary action were positively received.

Open Issues / Risk

Minor enhancement: some dogfooders requested an estimated preparation time before checkout.

Production Readiness Metric

1.6s

Menu interactive time, p95

Target: < 2.0 seconds

Mitigations

Deliver estimated preparation time as the planned P1 enhancement.
Monitor menu load time and item-selection errors after launch.

Status reflects the scenario assumptions shown on this slide.

Feature 2: Single-Token Checkout

SOME RISK

Testing and Dogfood Feedback

TESTING (QA)

Core checkout and order-review tests passed.
One edge case failed when the stored payment method expired.

DOGFOOD

Checkout was described as simple and familiar.
Stored payment increased confidence in the flow.

Production Readiness Metric

99.4%

Successful checkout rate

Target: $\geq 99.0\%$

Open Issues / Risk

Expired stored-payment credentials may cause a failed checkout without enough early guidance.
Payment flow is launch-critical.

Mitigations

Detect expired payment credentials before confirmation.
Prompt the guest to update payment details and add regression coverage.

Status reflects the scenario assumptions shown on this slide.

Feature 3: Confirmation and Live Tracking

SOME RISK

Testing and Dogfood Feedback

TESTING (QA)

Confirmation and status-sequence tests passed.

Connectivity-recovery behavior remains under observation.

DOGFOOD

Tracking was viewed as useful and reassuring.

Dogfooders wanted clearer freshness of status updates.

Open Issues / Risk

Poor connectivity may delay status refresh and make the last update unclear.

Production Readiness Metric

8.4s

Tracking update latency, p95

Target: < 10 seconds

Mitigations

Add retry and offline queueing.
Show the last updated timestamp and alert on stale status.

Status reflects the scenario assumptions shown on this slide.

Controlled pilot launch with two tracked conditions

CONDITIONAL GO

Proceed with a controlled pilot launch

The core experience is validated and readiness targets are met or exceeded. Launch can proceed once the expired-payment edge case is fixed and tracking freshness monitoring is enabled.

Feature 1: Ready to Launch

Feature 2: Some Risk, mitigation required before pilot

Feature 3: Some Risk, monitoring required during pilot

Launch Conditions

Close the expired-payment defect and rerun checkout regression tests.
Enable stale-status detection and tracking-latency alerts.

Pilot Monitoring

Checkout success rate $\geq 99.0\%$.
Menu interactive time p95 < 2 seconds.
Tracking latency p95 < 10 seconds.
Watch sign-in failures, payment errors, and stale order statuses.

Meeting Purpose

- Review launch readiness across product, engineering, QA, research, support, marketing, and legal.
- Confirm mitigation owners for checkout and tracking risks.
- Make the final go / no-go decision for the controlled pilot.

MEETING INVITATION

Subject: My Concierge Go / No-Go Launch Review

Hello Team,

We are approaching the planned pilot launch for My Concierge, our in-app room-service ordering experience. This meeting will review launch readiness and confirm the final go / no-go decision.

CURRENT STATUS

- ✓ Core ordering journey validated.
- ✓ Quality and readiness results meet or exceed the scenario targets.
- ✓ Current recommendation: Conditional Go for a controlled pilot.

KEY RISKS TO REVIEW

- Expired stored-payment edge case.
- Tracking-status freshness under poor connectivity.
- Monitoring for sign-in, payment, and tracking metrics.

Please review the launch deck before the meeting and bring any blockers or dependencies. Looking forward to making the decision together.

Rafaela Pinheiro | Product Manager, My Concierge

Director Feedback

*This all looks really promising.
Can we launch two weeks
earlier than originally planned?*

RESPONSE PRINCIPLE

Acknowledge the opportunity, protect launch-critical quality, and define objective conditions for reconsidering the date.

Response

The product is progressing well, but the expired-payment edge case and tracking-freshness monitoring still require completion before launch. Moving two weeks earlier would reduce the time available for the checkout fix, regression testing, and production-monitoring setup. Because checkout is launch-critical, I recommend closing and re-validating the payment issue before accelerating the schedule. If the mitigation work finishes early and all readiness metrics remain within target, the team can reassess the date with leadership. Current recommendation: maintain the planned date and prioritize a successful, low-risk pilot.

Decision Framework

Fix

Expired-payment edge case

Verify

Checkout regression and tracking alerts

Reassess

Earlier date only if gates pass

CORE UX FLOW

Contextual
EntryRoom Service
MenuItem
ReviewAdd to
OrderOrder
SummaryStored-Payment
CheckoutConfirmation +
Tracking

Priority	Feature	Description	Scope Rationale
P0	Contextual Room Service Entry	Display a prominent Room Service option for guests with an active stay.	Required entry point for the tested end-to-end journey.
P0	Visual Digital Menu	Present image-led room-service items with pricing and item information.	Replaces reliance on paper menus and supports clear discovery.
P0	Item Selection and Add to Order	Allow the guest to review a selected item and add it through a clear primary action.	Directly validated during Task 1 and Task 2.
P0	Transparent Order Review	Display selected items, charges, total price, room information, and stored payment method.	Participant confirmed the expected information was present.
P0	Single-Token Checkout	Authorize payment using credentials already stored in the Hilton Honors profile.	Core friction-reduction mechanism and a positive testing signal.
P0	Confirmation and Live Tracking	Confirm submission and show fulfilment stages and estimated delivery information.	Completes the journey and provides post-order visibility.
P1	Pre-Order Preparation Estimate	Show estimated preparation or delivery time before confirmation.	Interview enhancement request; useful but not a blocker.
P2	Personalized Recommendations	Recommend items or services based on previous purchases or preferences.	Future personalization opportunity suggested during testing.

P0 Must Have | P1 Should Have | P2 Could Have

Initial scope: in-room dining only | Other concierge services out of scope

My Concierge: One-Tap In-Room Service Ordering

01

Description

The prototype demonstrates a frictionless in-room dining experience through the My Concierge module within the Hilton Honors app. Guests can browse room service options, review a selected menu item, complete their purchase using a stored payment method, and track delivery progress in real time without needing to call the front desk. The solution aims to reduce operational friction, improve guest convenience, increase digital adoption, and drive incremental on-property revenue.

02

Assumptions

- The guest is already checked into the hotel and has access to the Hilton Honors app.
- The guest has an active digital room key linked to their stay.
- Payment details are already securely stored within the Hilton Honors profile.
- The hotel's order management system can receive and process orders submitted through My Concierge.
- Real-time order status updates are available and can be displayed within the application.
- Guests have internet connectivity through hotel Wi-Fi or mobile data.
- Pricing, availability, and menu content are maintained by hotel operations.

03

Tasks

- Access the My Concierge room service experience from the Hilton Honors app.
- Browse available room service offerings through a visual, image-led menu.
- Select a food item and add the preconfigured selection to the order.*
- Review order details and pricing before submission.
- Complete a secure one-tap checkout using a stored payment method.
- Track order preparation and delivery status in real time.
- Return to the home screen after placing an order.
